PREVENT MOHO

FUNGICIDA Y REPELENTE PERMANENTE PARA INMUNIZAR CONSTRUCCIONES

Contra moho y ablandamiento y para evitar algas, levaduras y musgos

Además, evita la aparición de plagas.

FICHATÉCNICA

PRODUCT	DESCRIPTION
	Kills fungi, bacteria, algae, and microorganisms causing mold, rot, and/or softening of materials. Additionally, acts as a permanent repellent against cockroaches, ants, scorpions, centipedes, and other pests. **Instructions for use** • Shake and dissolve in water according to label instructions, then apply by spraying on masonry, exposed brick, walls, floors, slabs, and gray construction work. • Use a coarse droplet sprayer to avoid vapors • Ideal for preventing stains from fungi and extending the durability of fiber-cement boards and tiles. • If needed to apply on painted or paint-mixed surfaces, it is recommended to conduct compatibility tests with the paint beforehand. **Precautions** • During application, protect yourself with a face shield, mask, gloves, and waterproof clothing • Avoid having just one person continuously handling the product to prevent occupational diseases. • If product spills on skin or eyes, it should be washed off immediately. • Do not apply with paint spray guns. (Vapors may cause eye irritation, respiratory allergies, and skin dryness).
Presentations	500 mL carboy ready for application 500 mL concentrated carboy for 10 liters. 500 mL concentrated carboy for 20 liters. 4500 mL concentrated gallon for 200 liters. 10000 mL concentrated carboy for 400 liters.
Brand	Preventmoho
Application color	Colorless if applied according to the recommended dose on the label.
General composition	Fungicides, algaecides, and long-lasting bactericides allowed and moderately toxic due to high concentration. The specific composition and formula are the manufacturer's industrial property protected by trade secrets and patent rights
